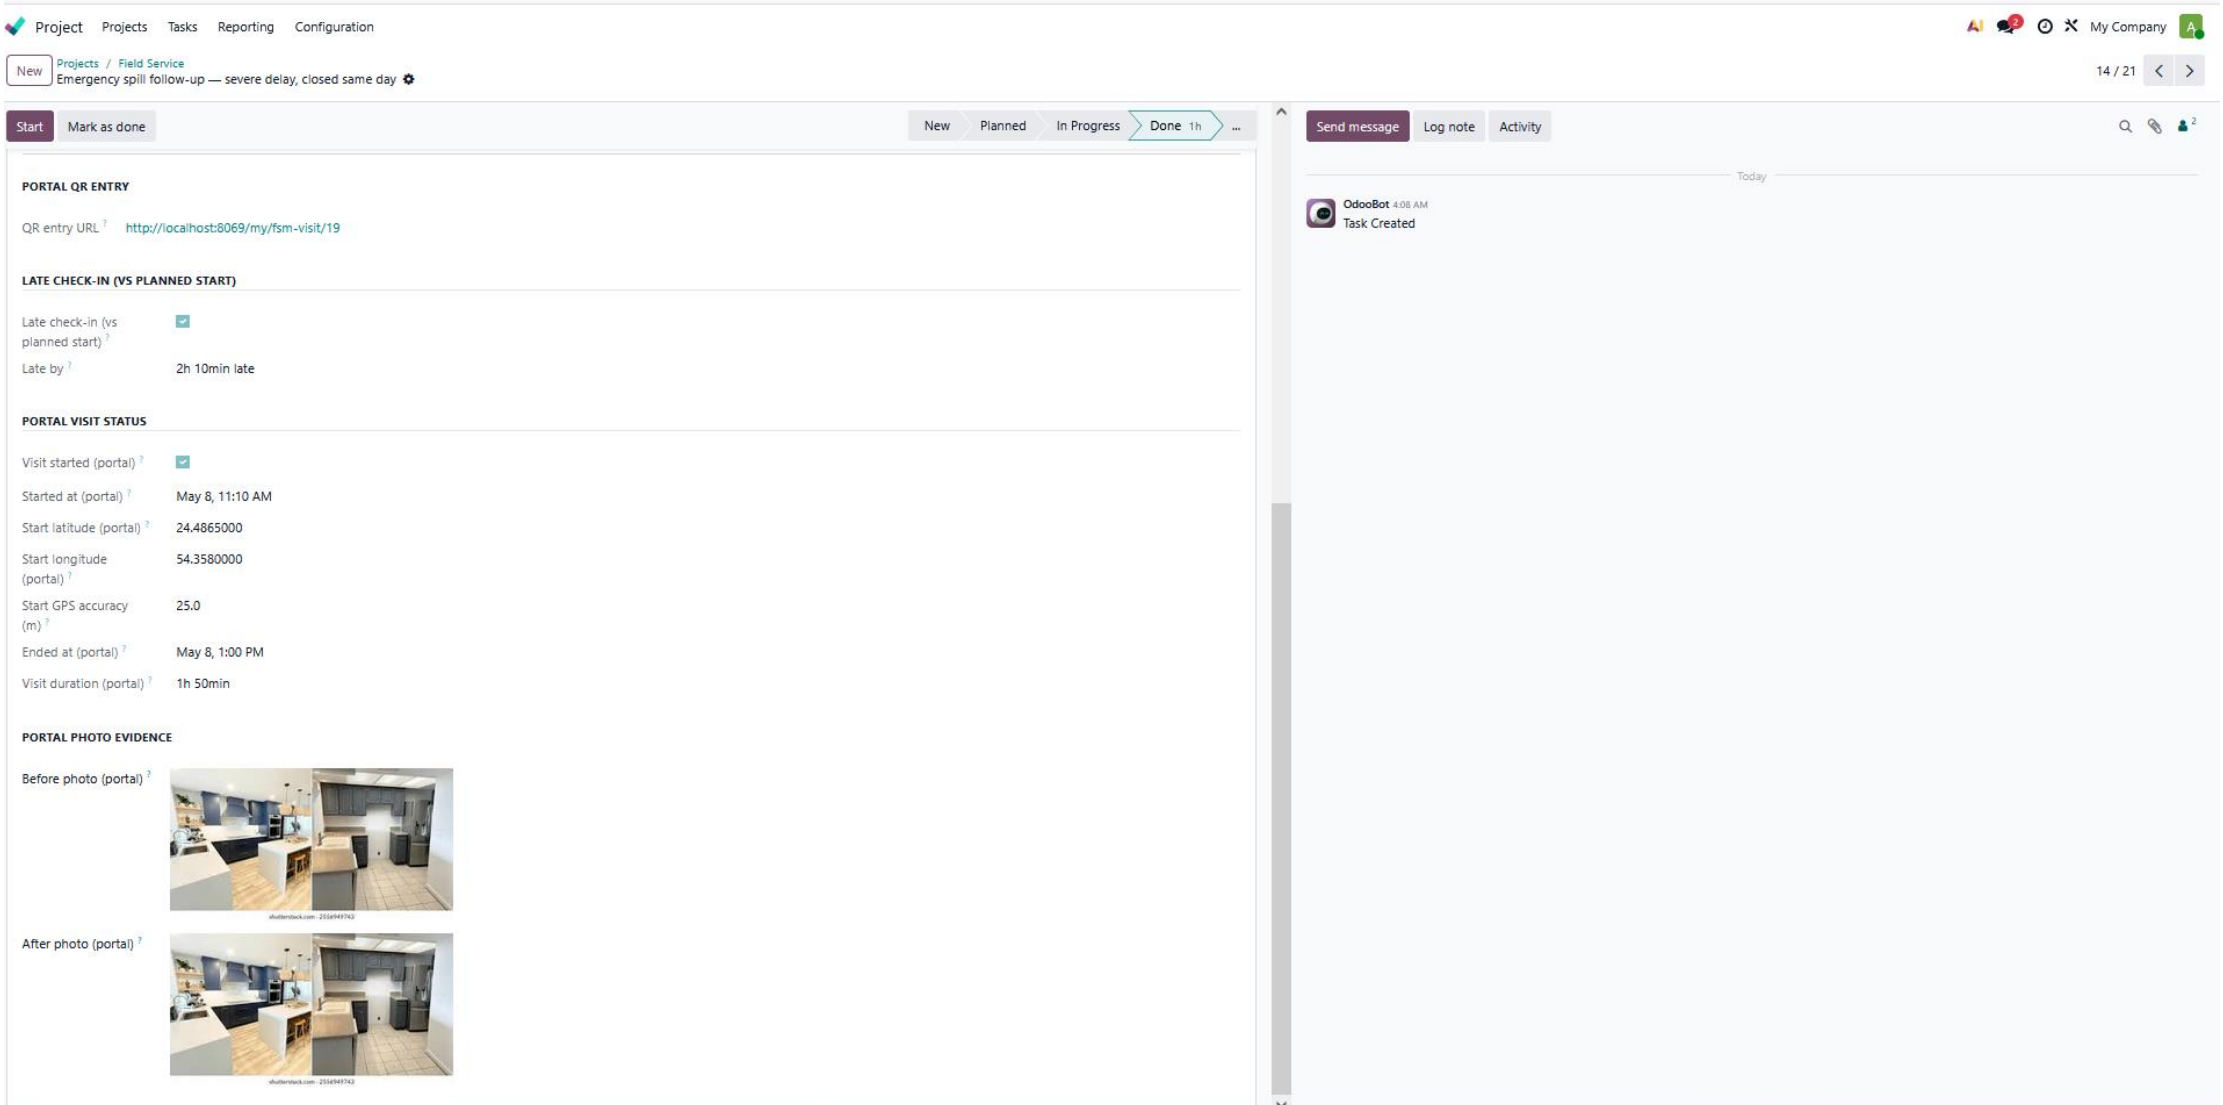
Cleaning Operations Workflow Demo

Odoo 19 Field Service + Portal Cleaner Execution Flow

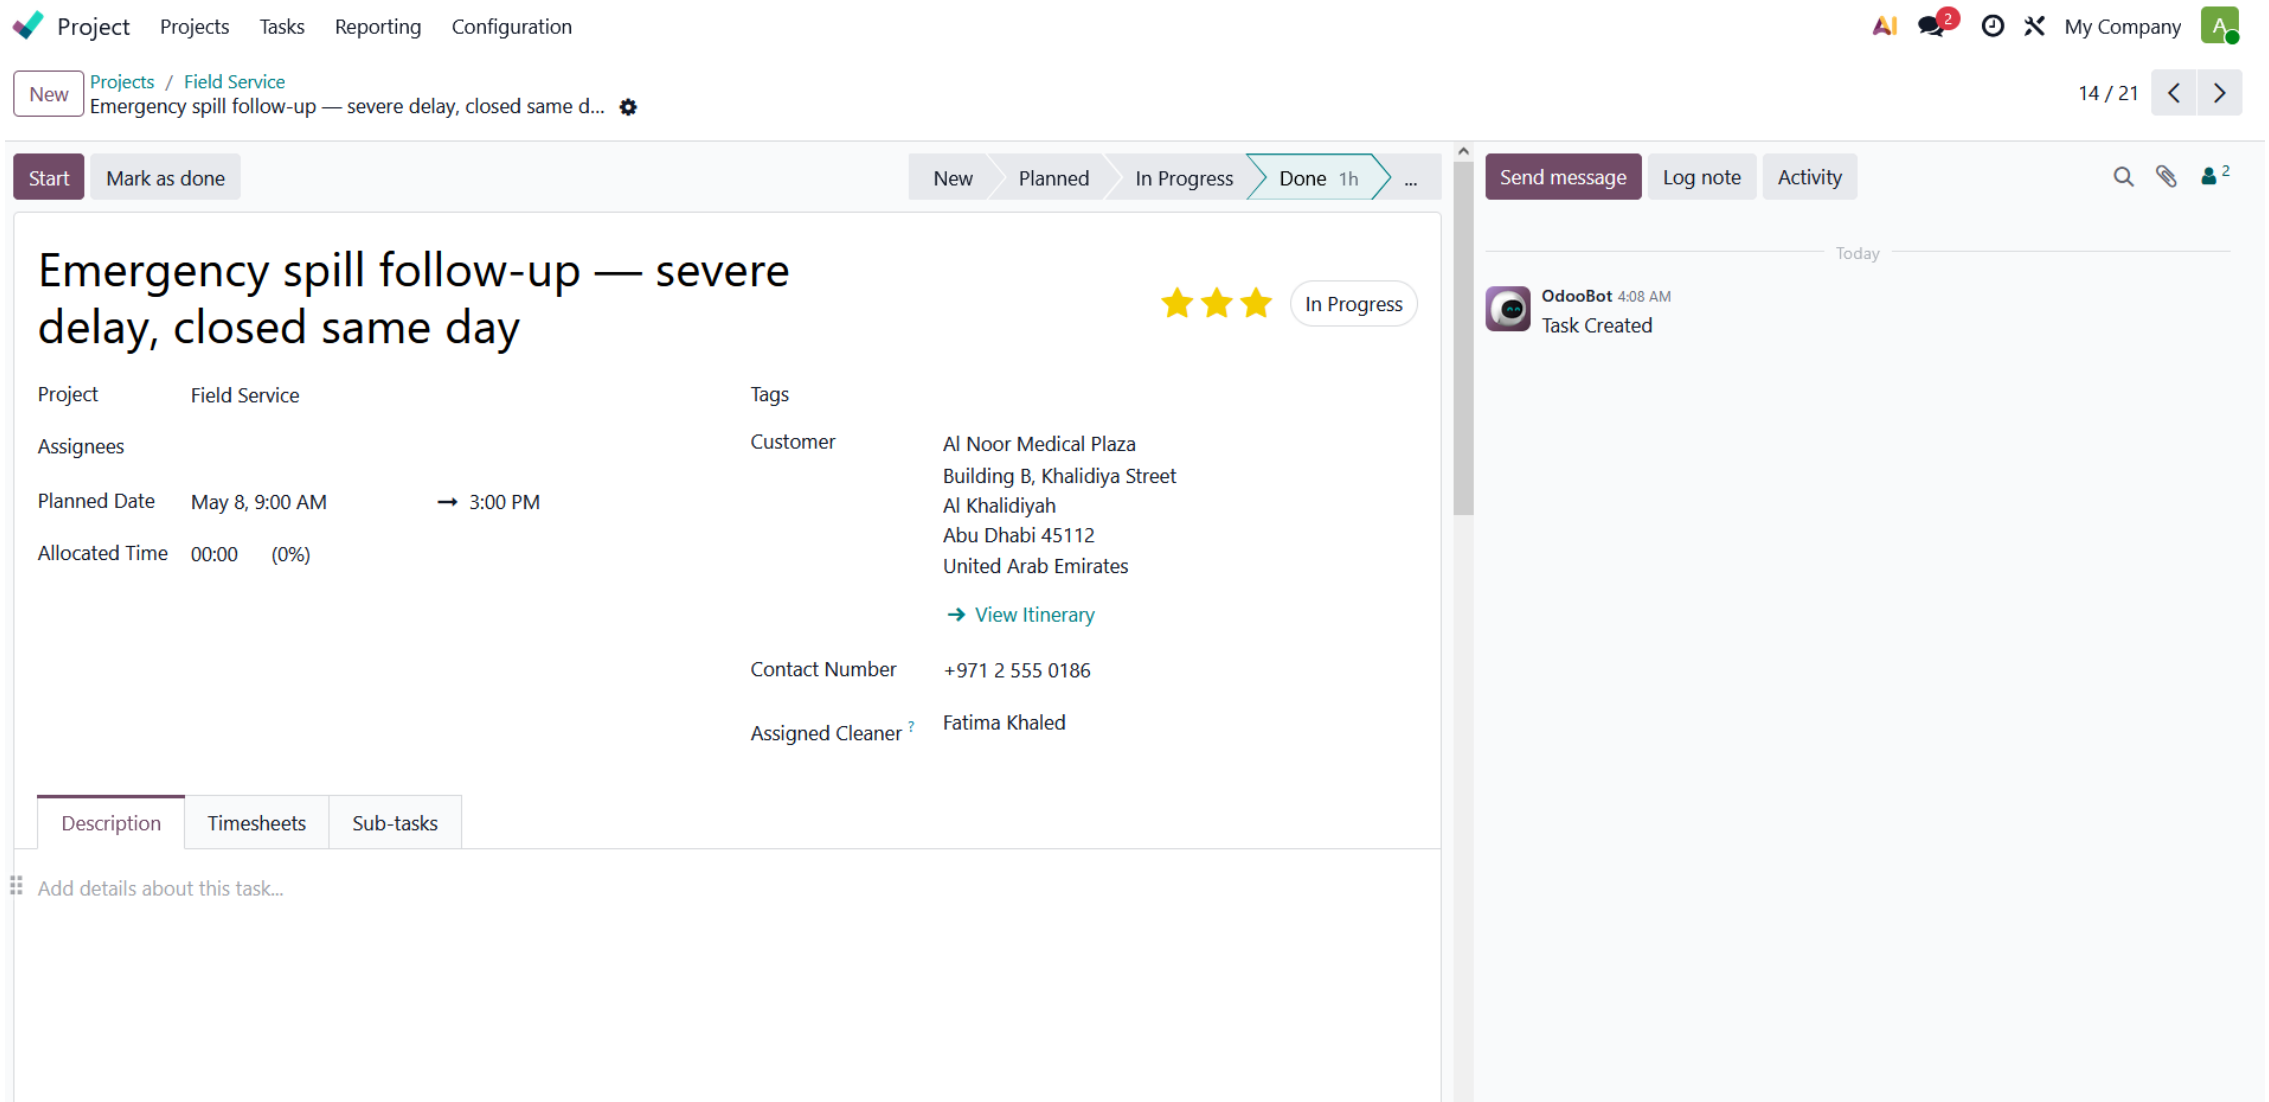
Scene 1 — Manager-side operational evidence overview

Single-task visibility of QR entry, late check-in, timestamps, GPS, duration, and photo evidence.



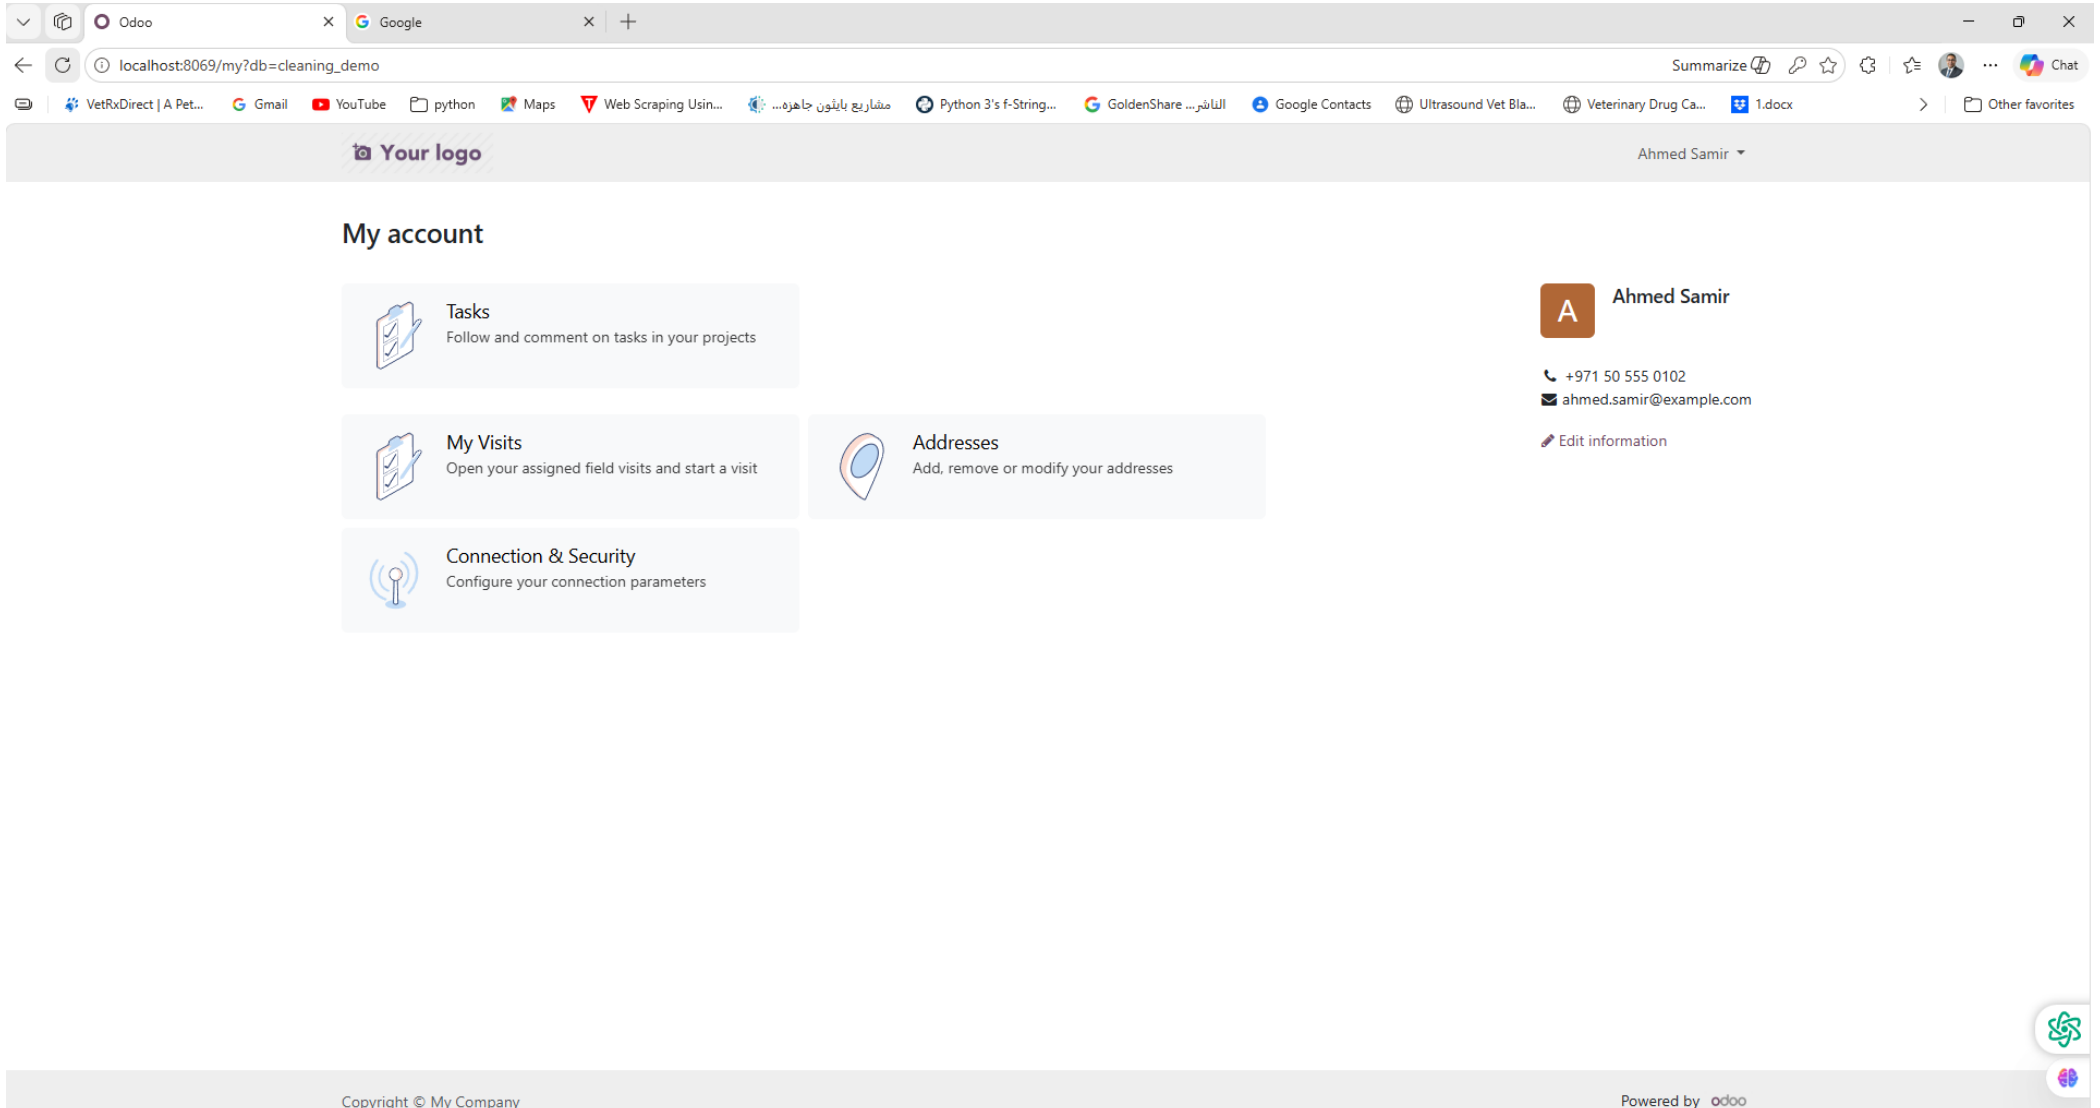
Scene 2 — Assignment, site, and planned visit overview

Manager can see the visit title, customer site, planned window, and assigned cleaner.



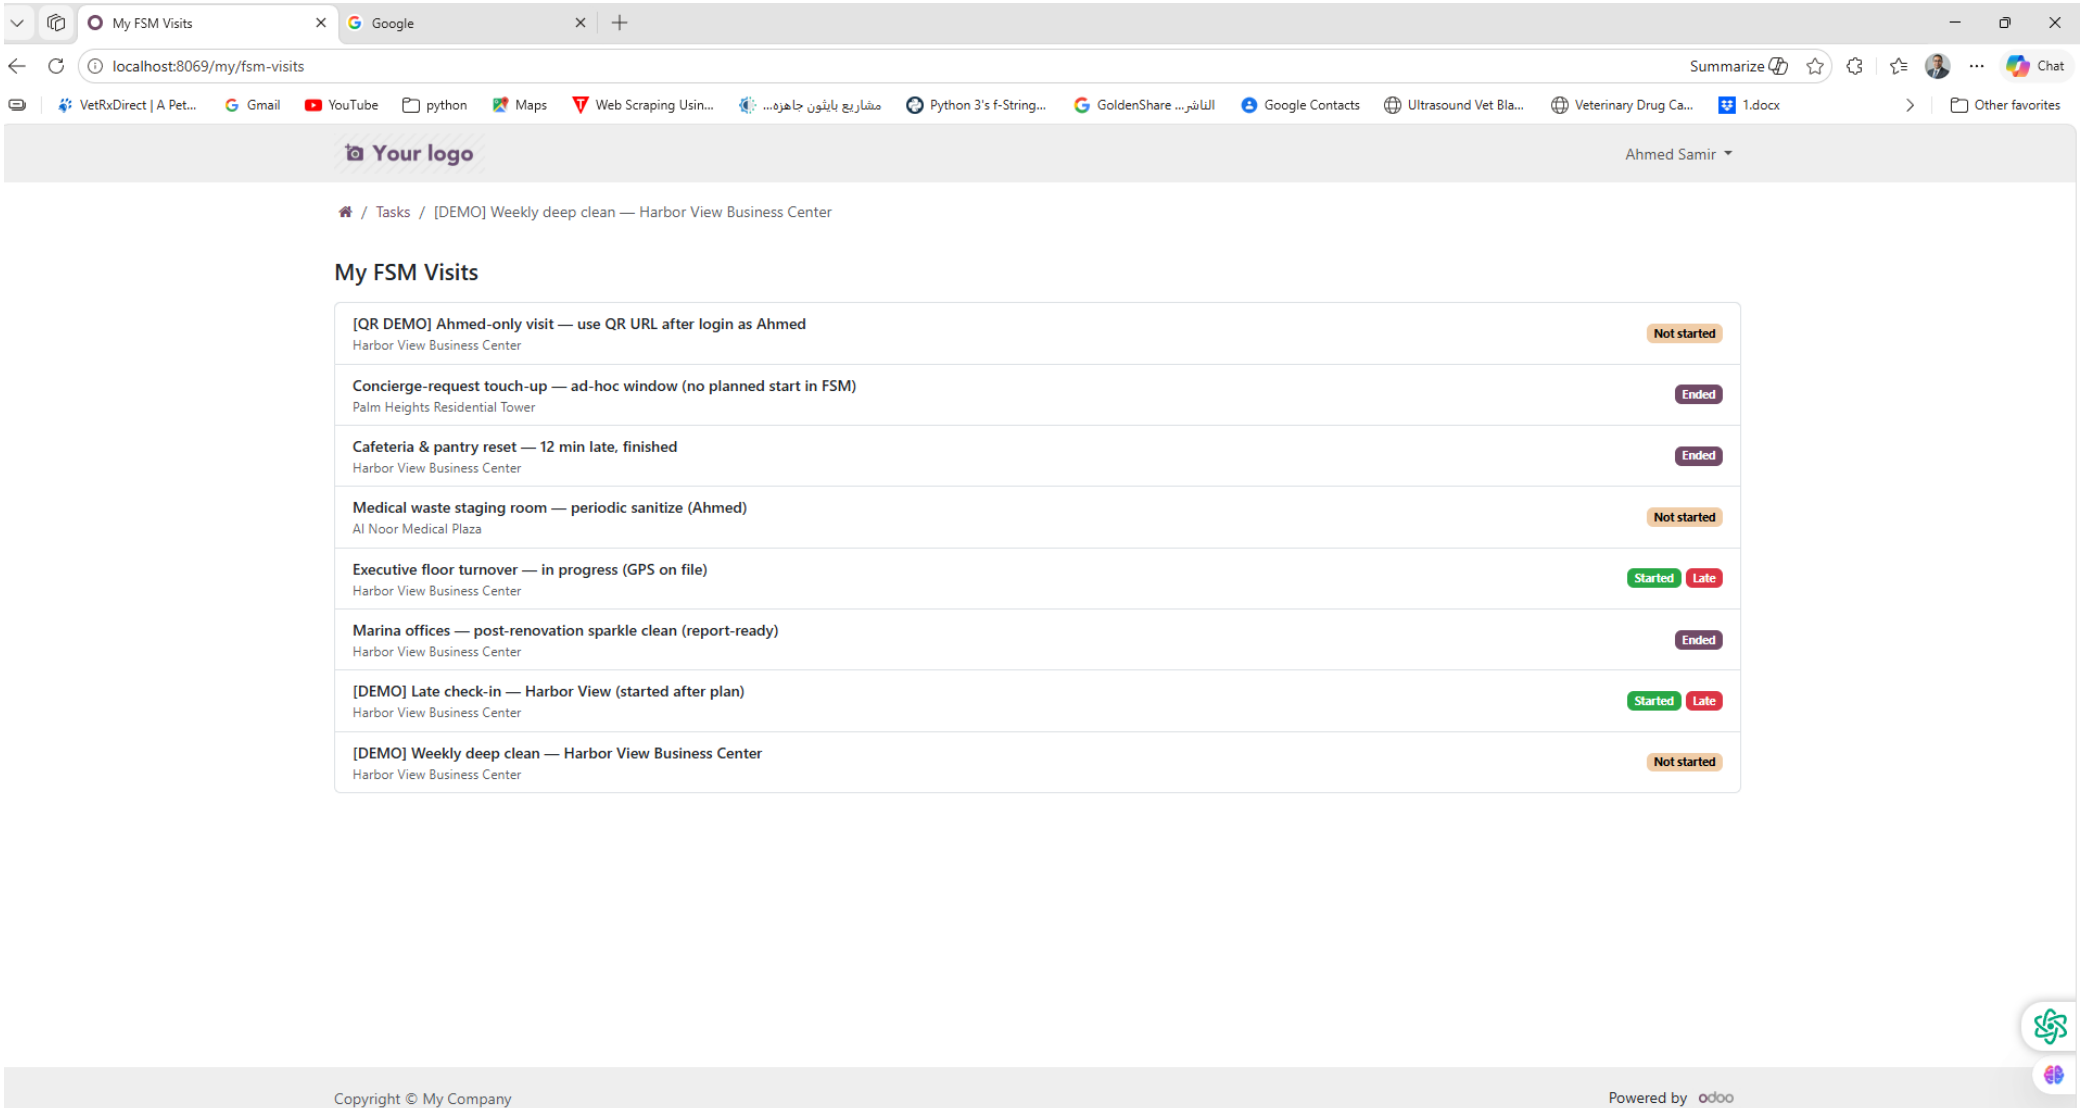
Scene 3 — Cleaner portal homepage and entry point

Cleaner accesses the workflow from a simple portal homepage through My Visits.



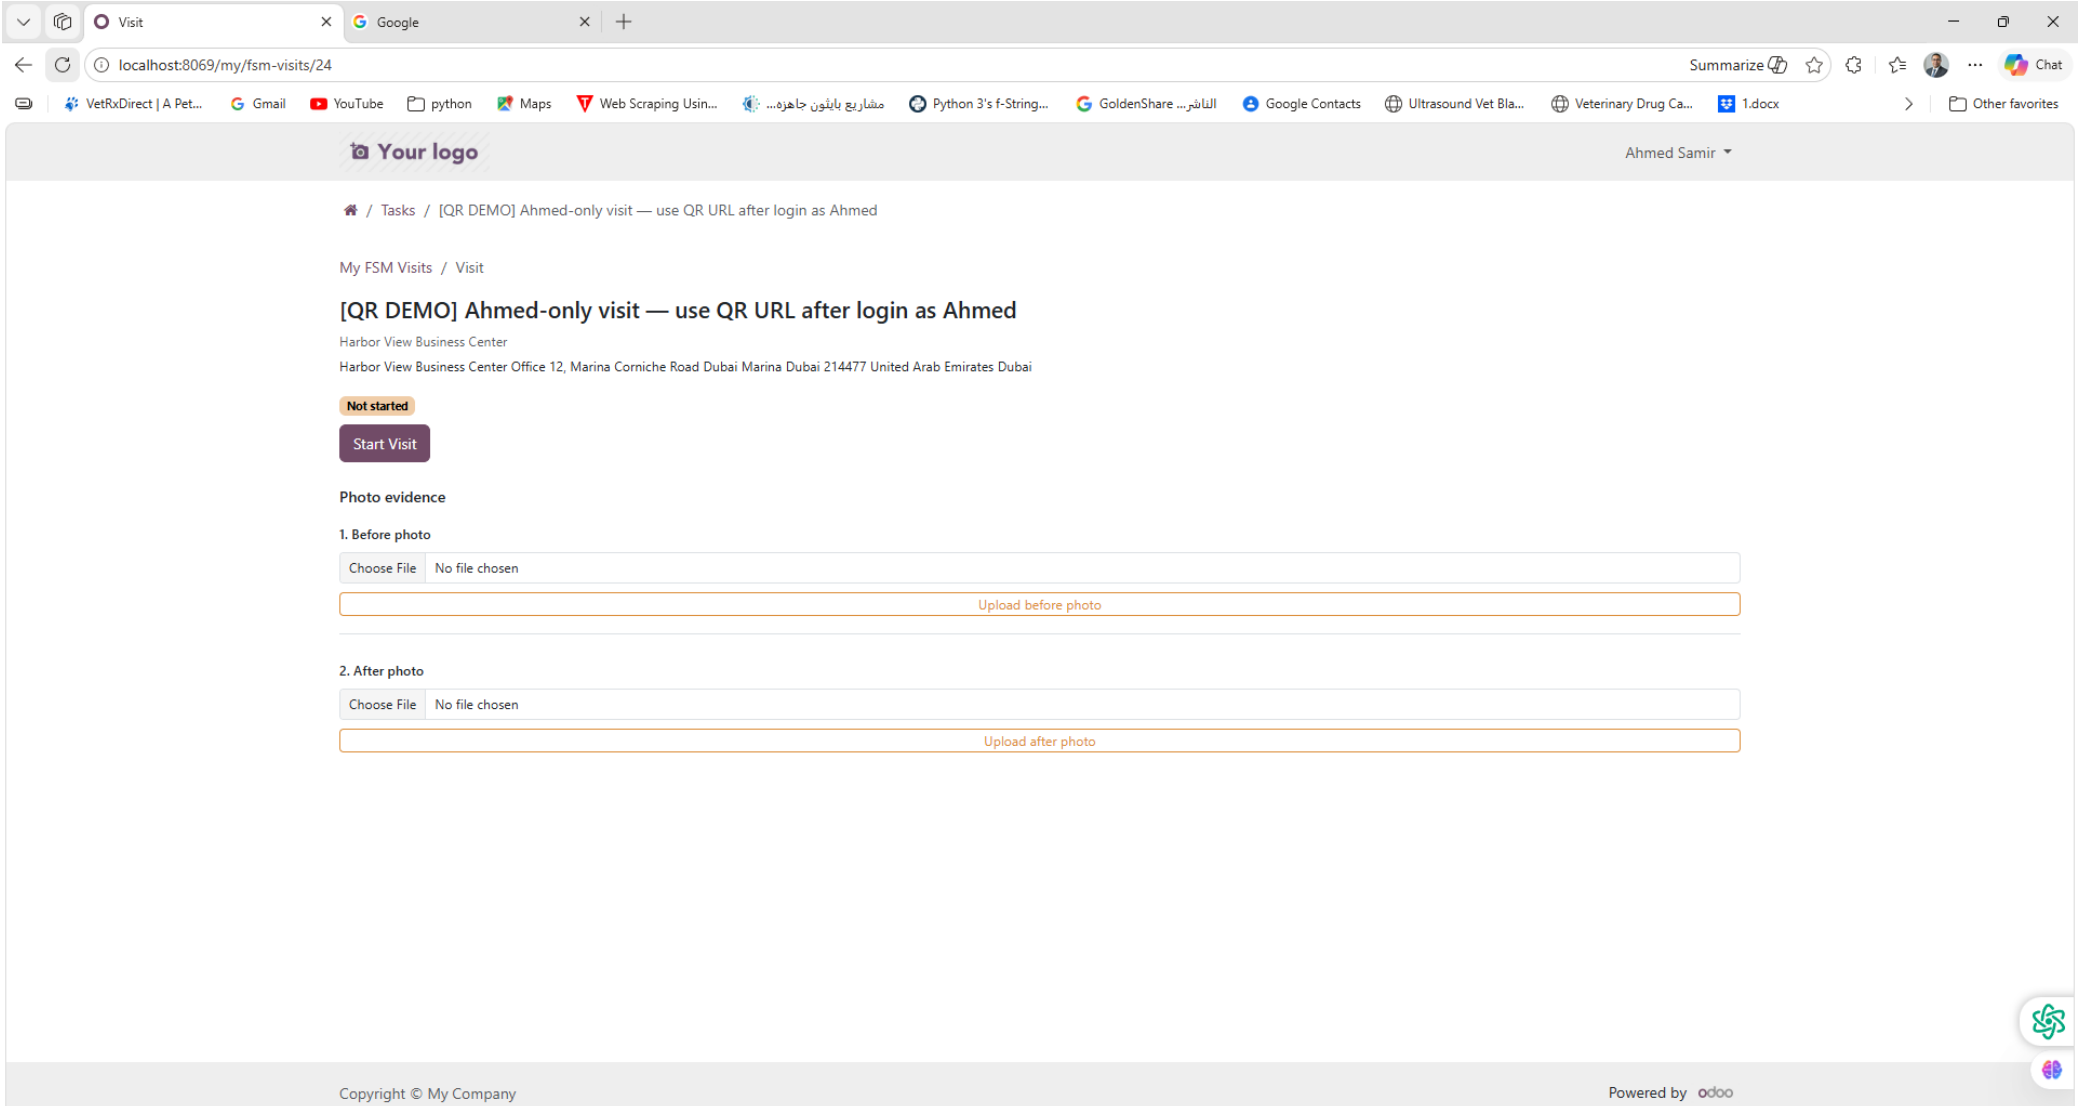
Scene 4 — Cleaner work queue / My Visits list

Cleaner sees only assigned visits with clear operational statuses.



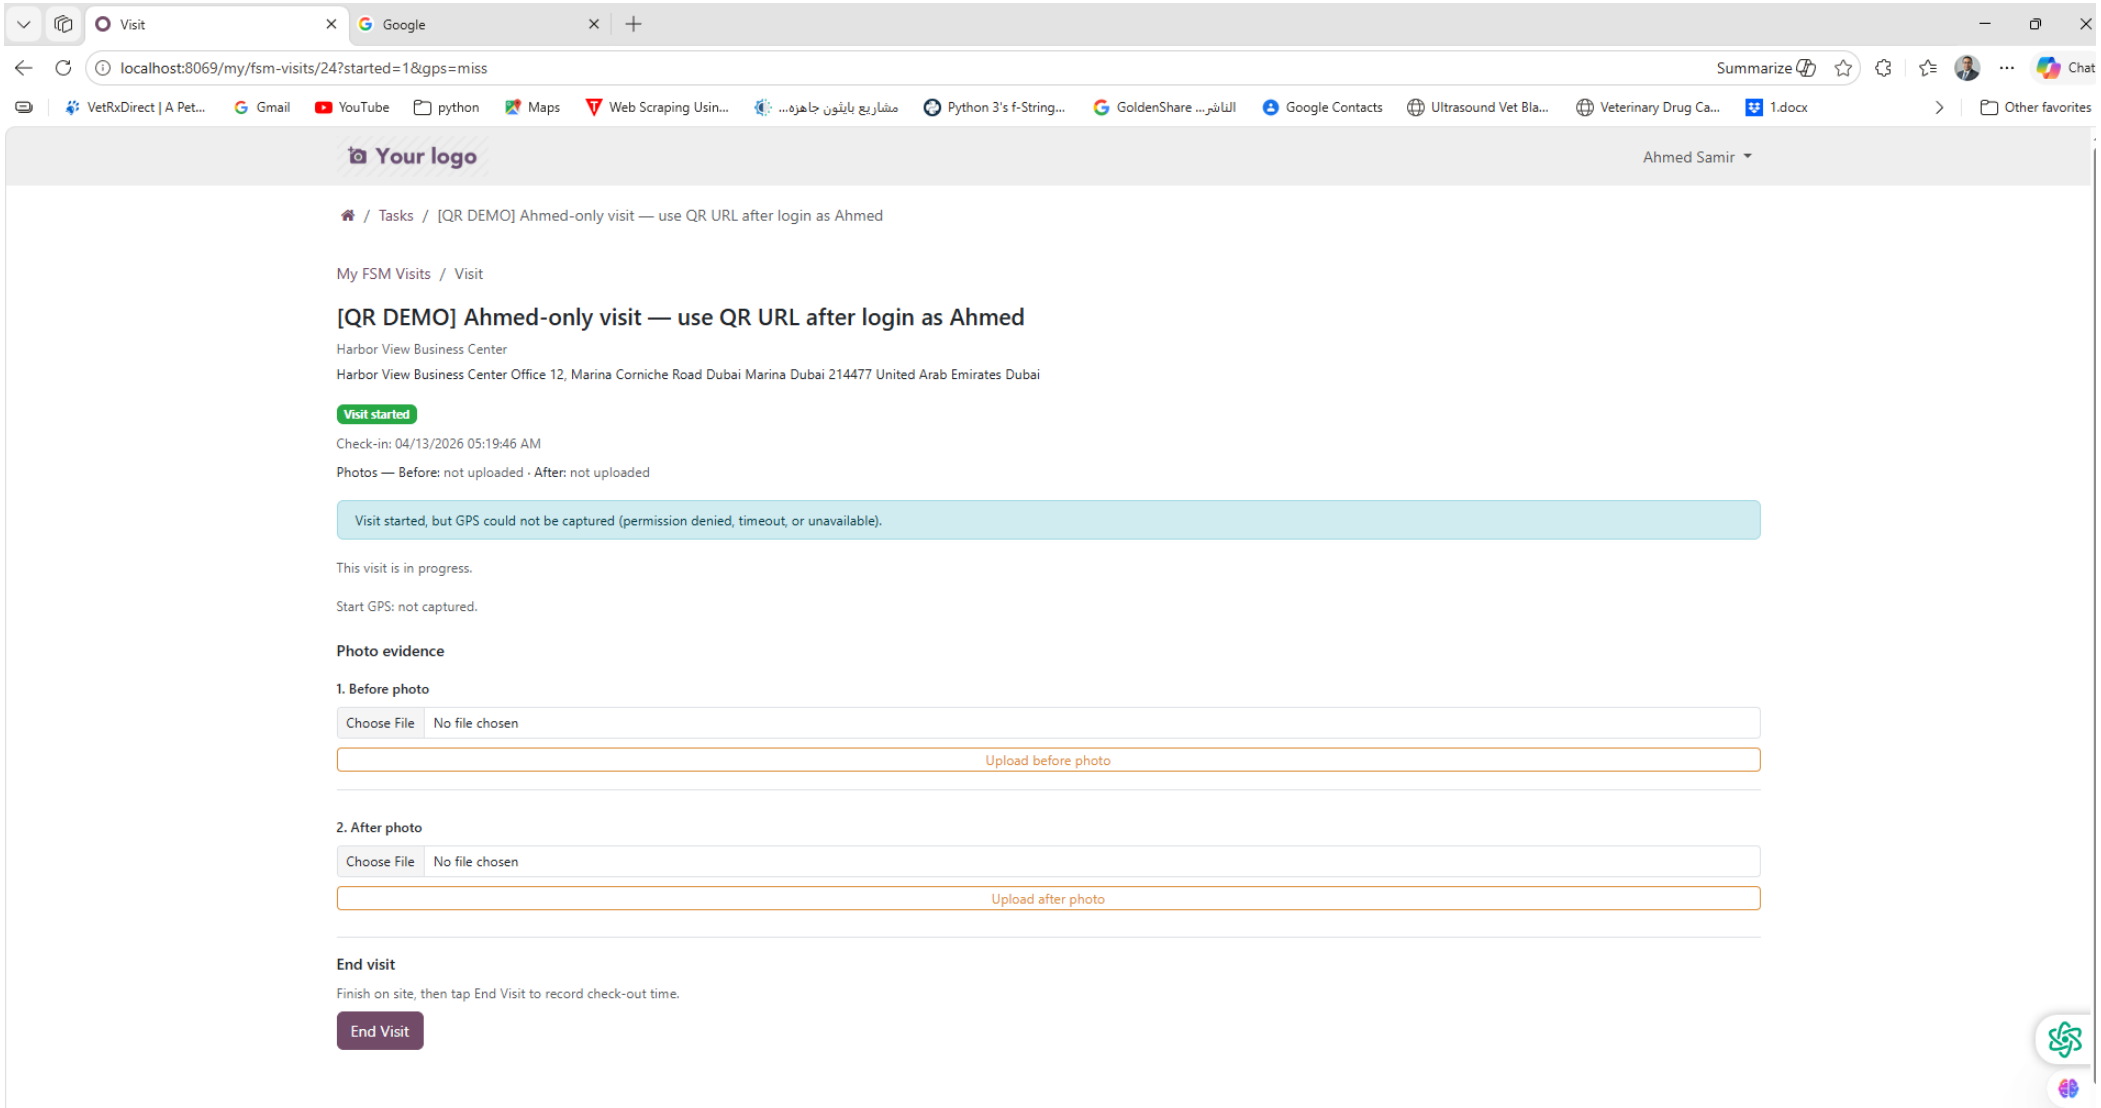
Scene 5 — Visit detail before starting execution

Visit starts from a simple portal page with Start Visit and photo evidence sections.



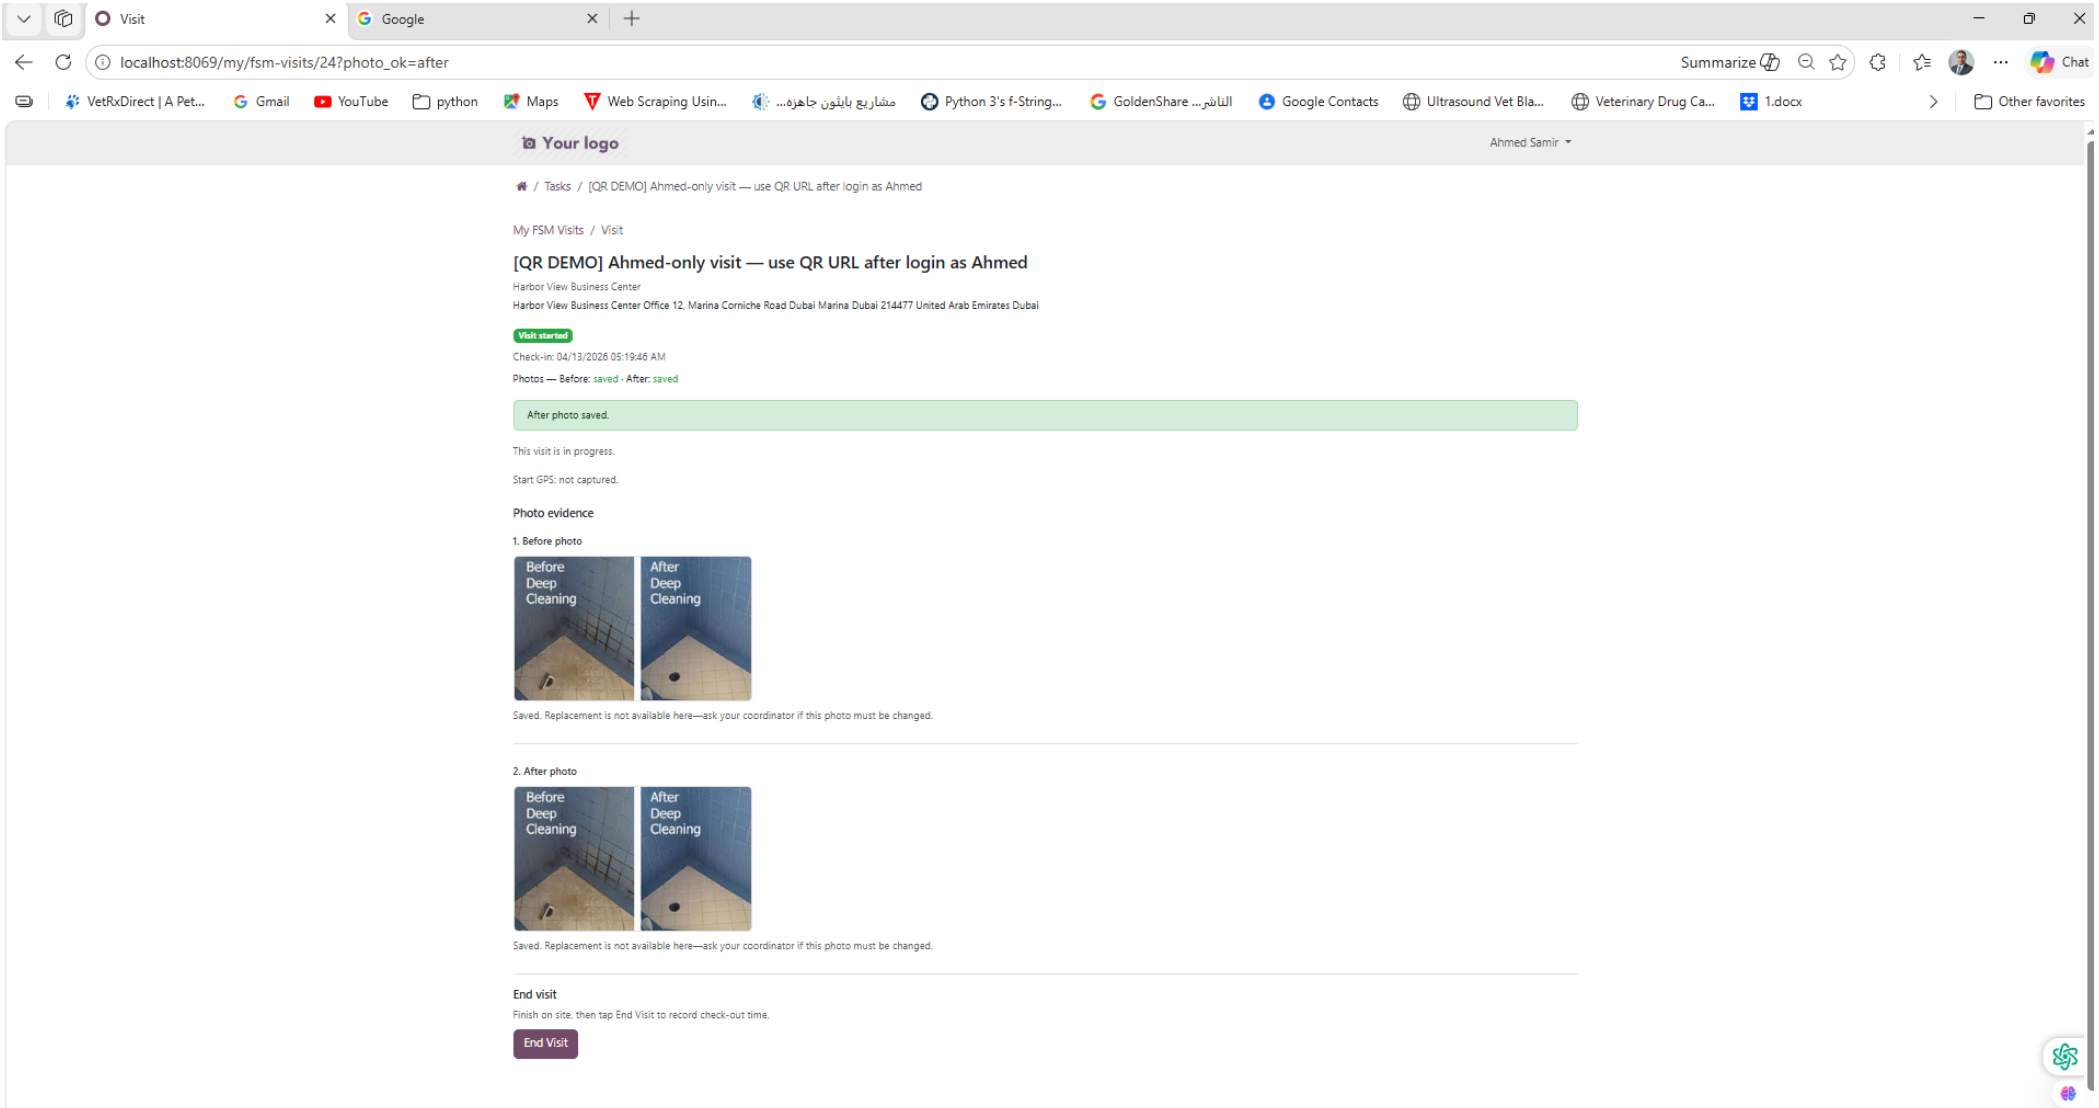
Scene 6 — Visit started with graceful GPS fallback

Check-in is recorded even when GPS cannot be captured.



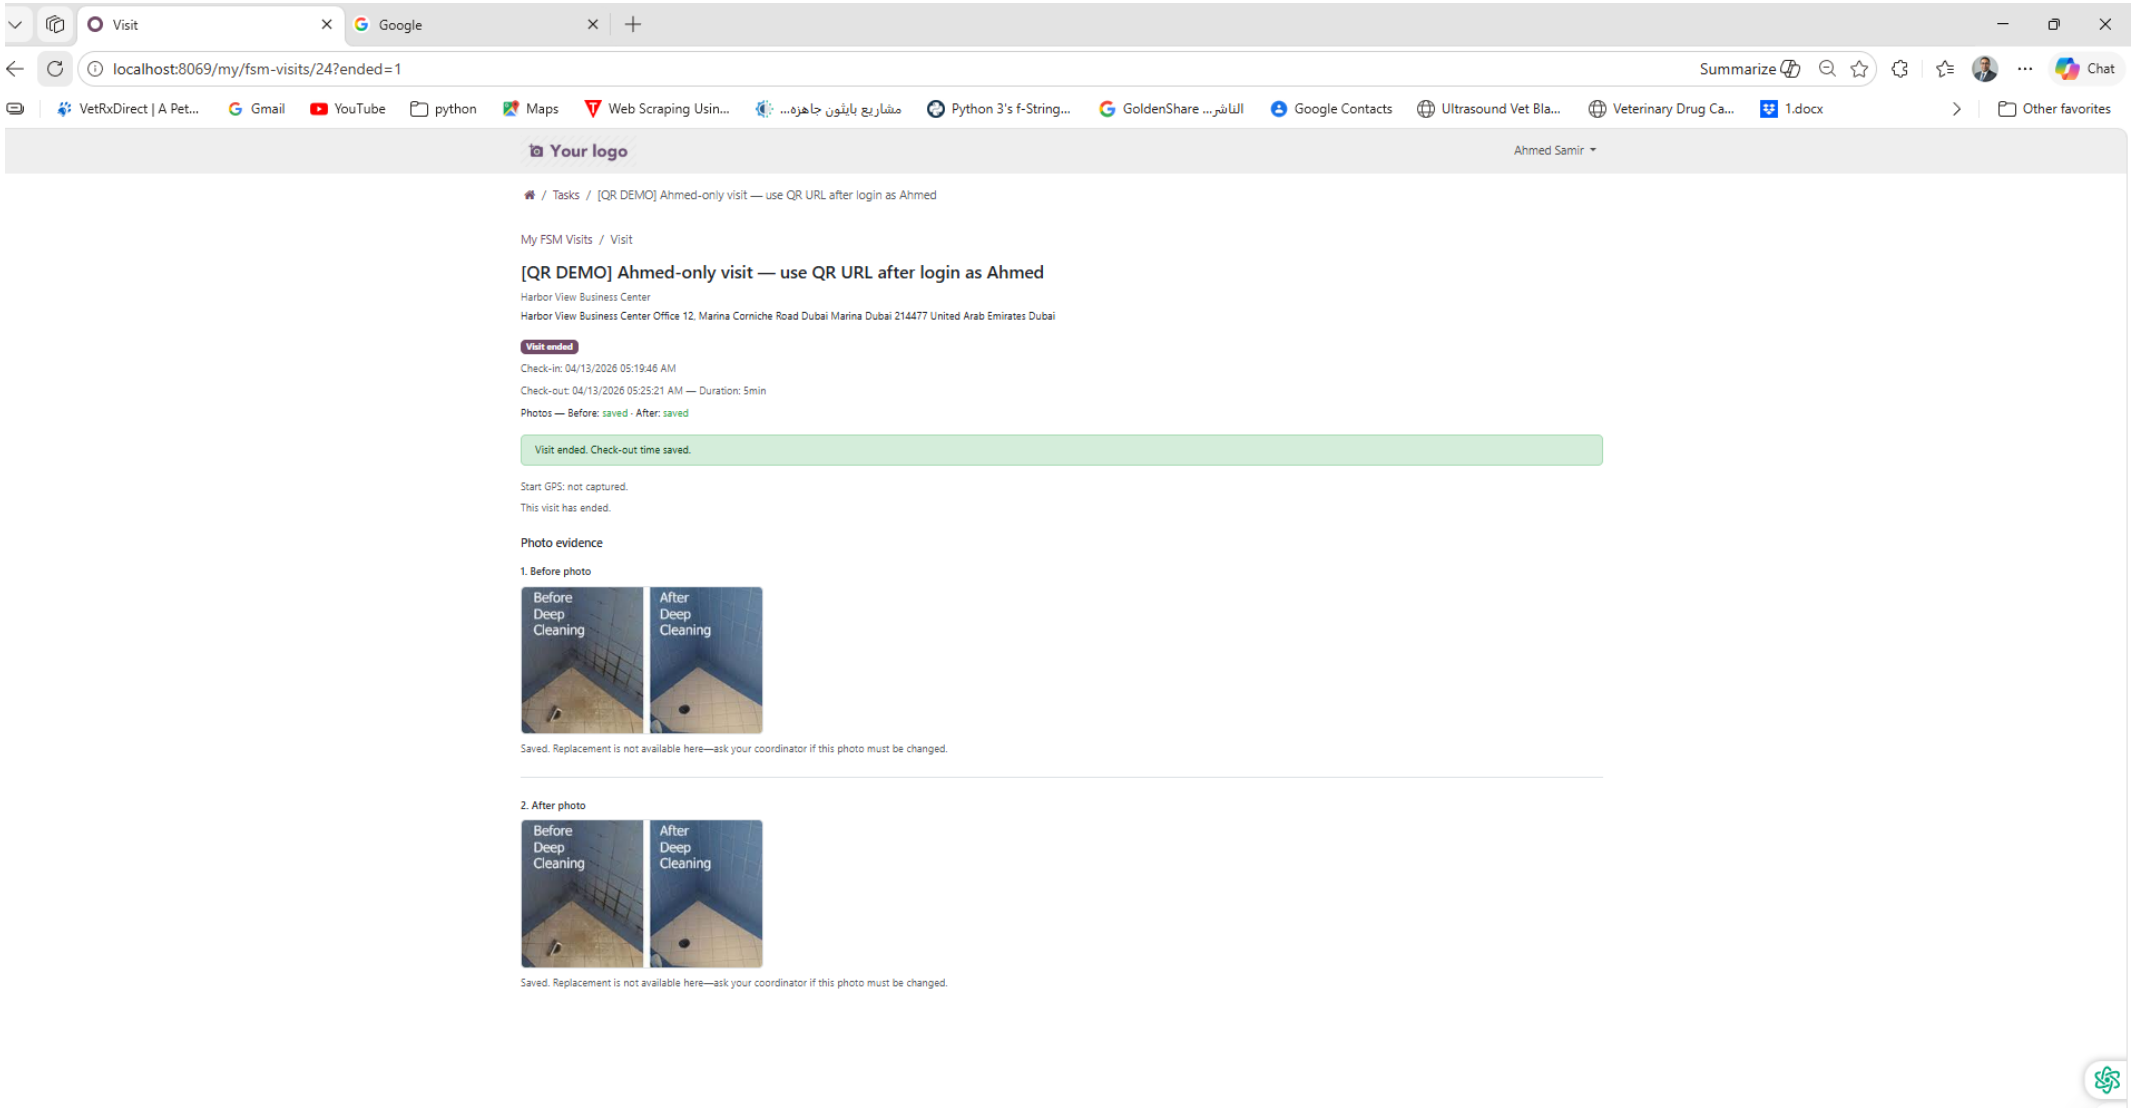
Scene 7 — Before and after photo evidence captured

Cleaner uploads visual evidence directly from the portal.



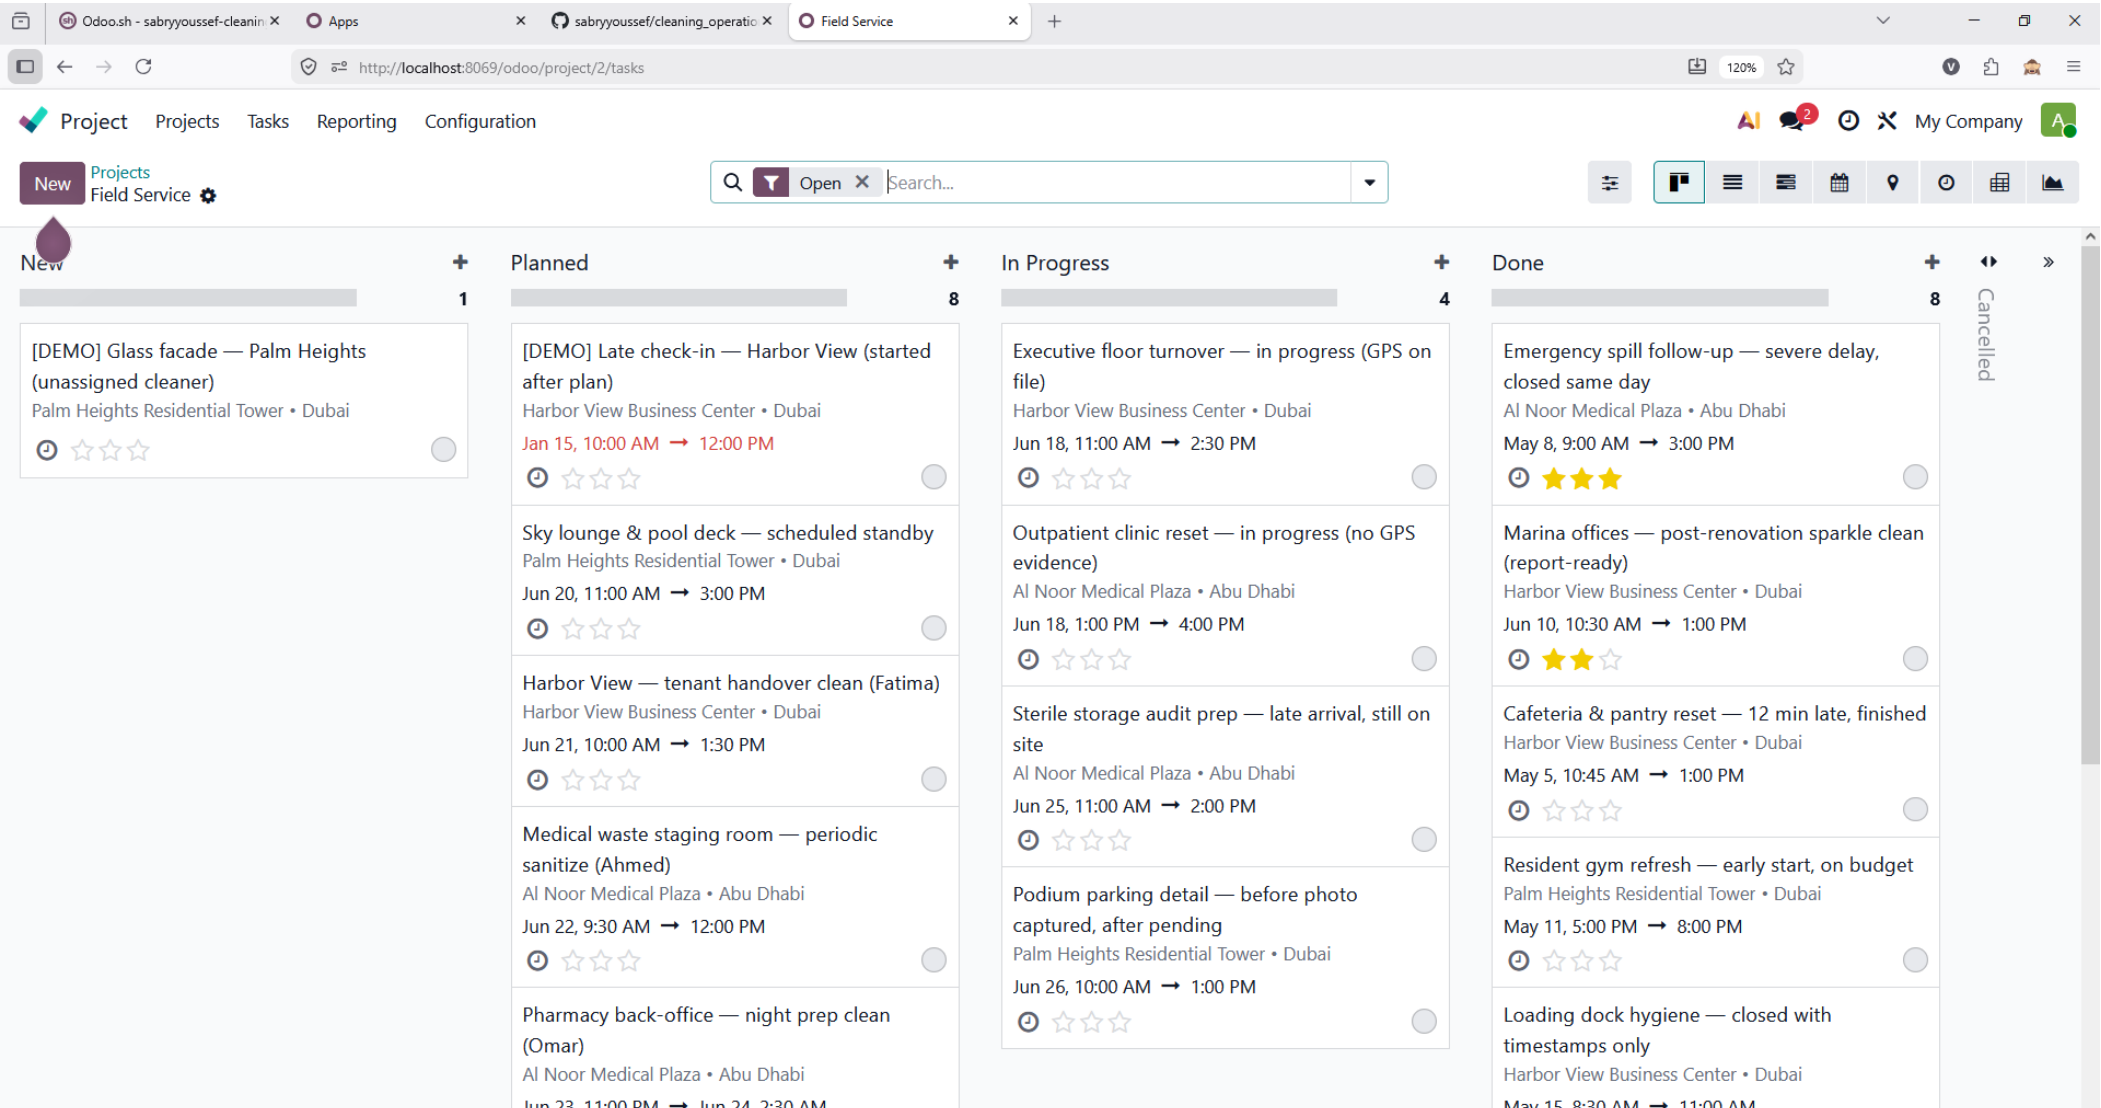
Scene 8 — Visit completed with check-out and duration

System records check-out and computes total visit duration.



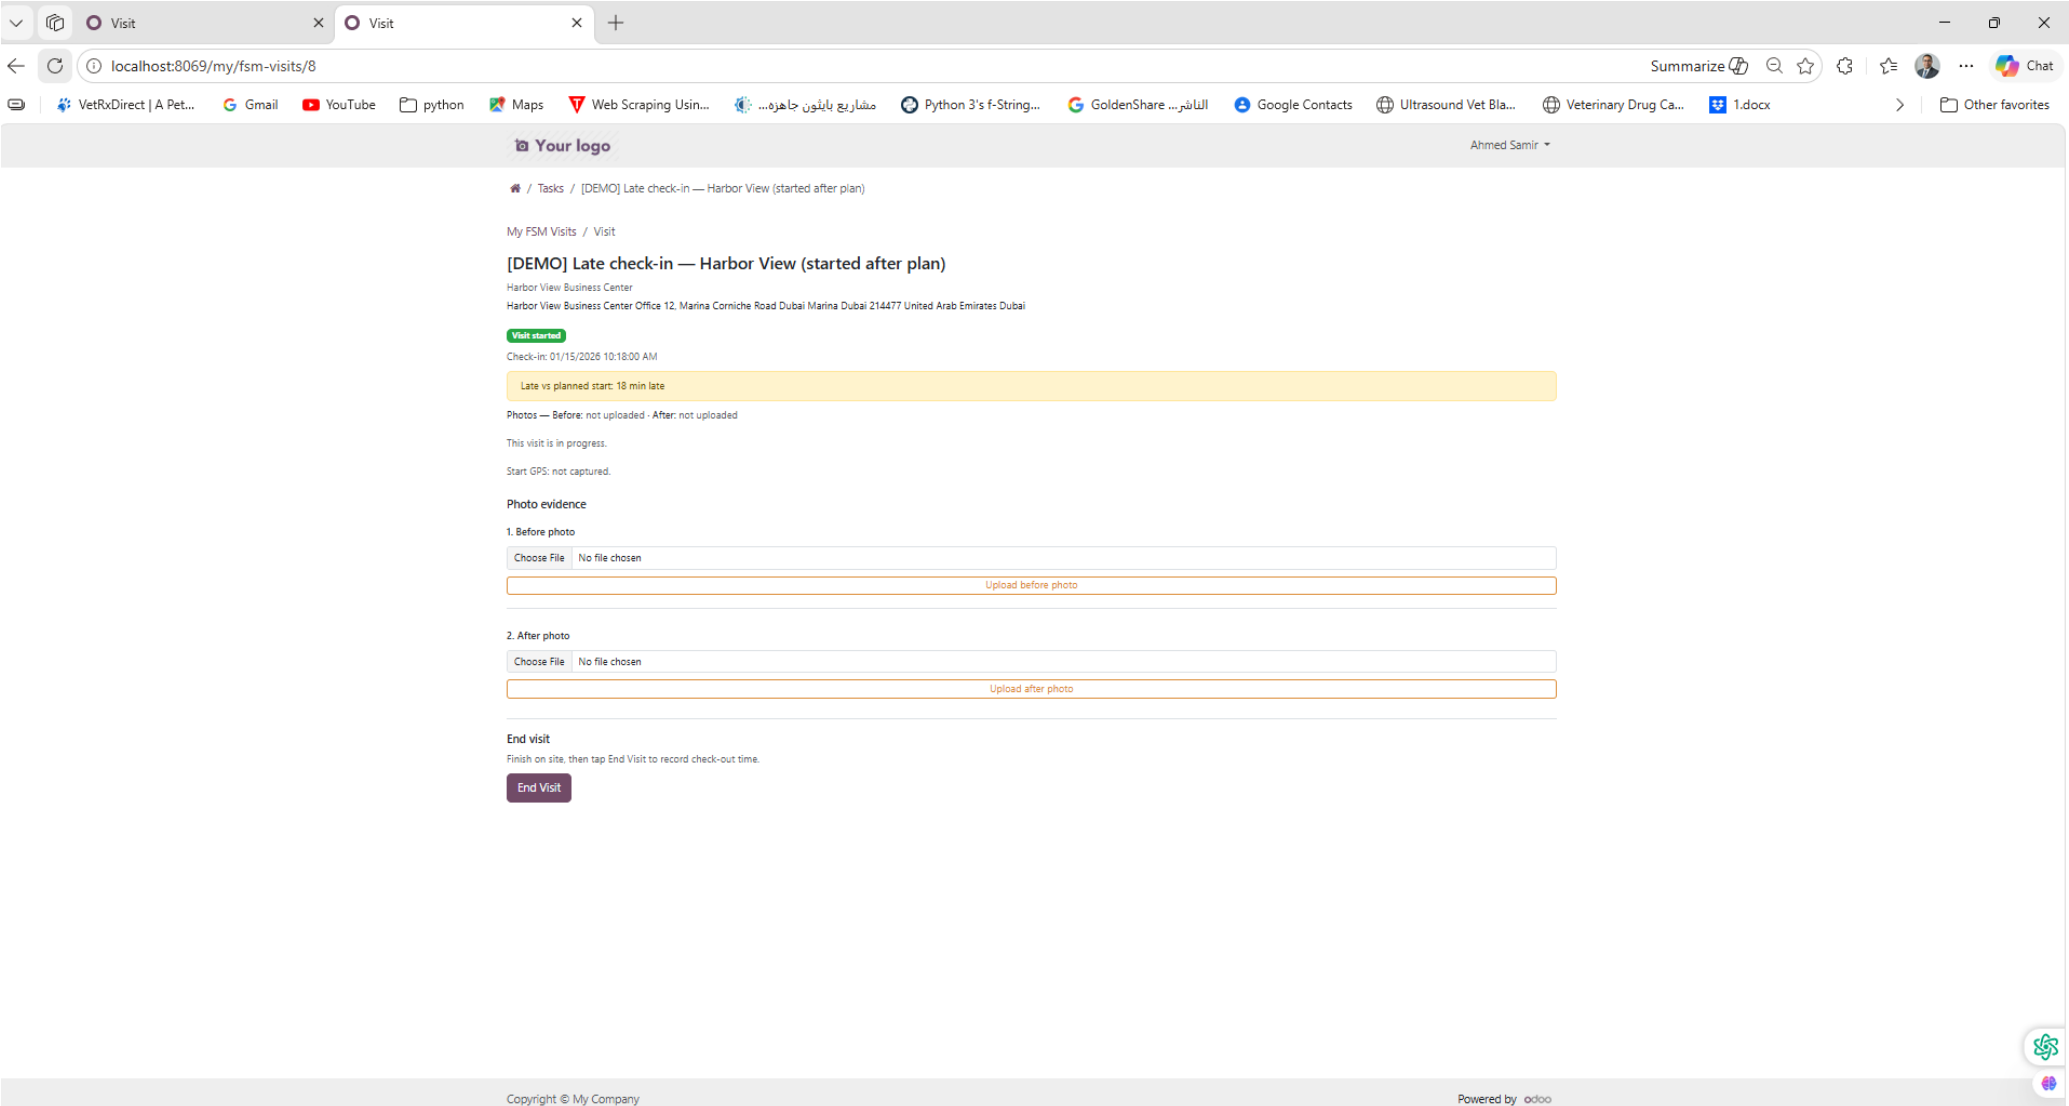
Scene 9 — Late check-in visibility for the manager

Manager can clearly identify delayed visit starts versus the planned schedule.



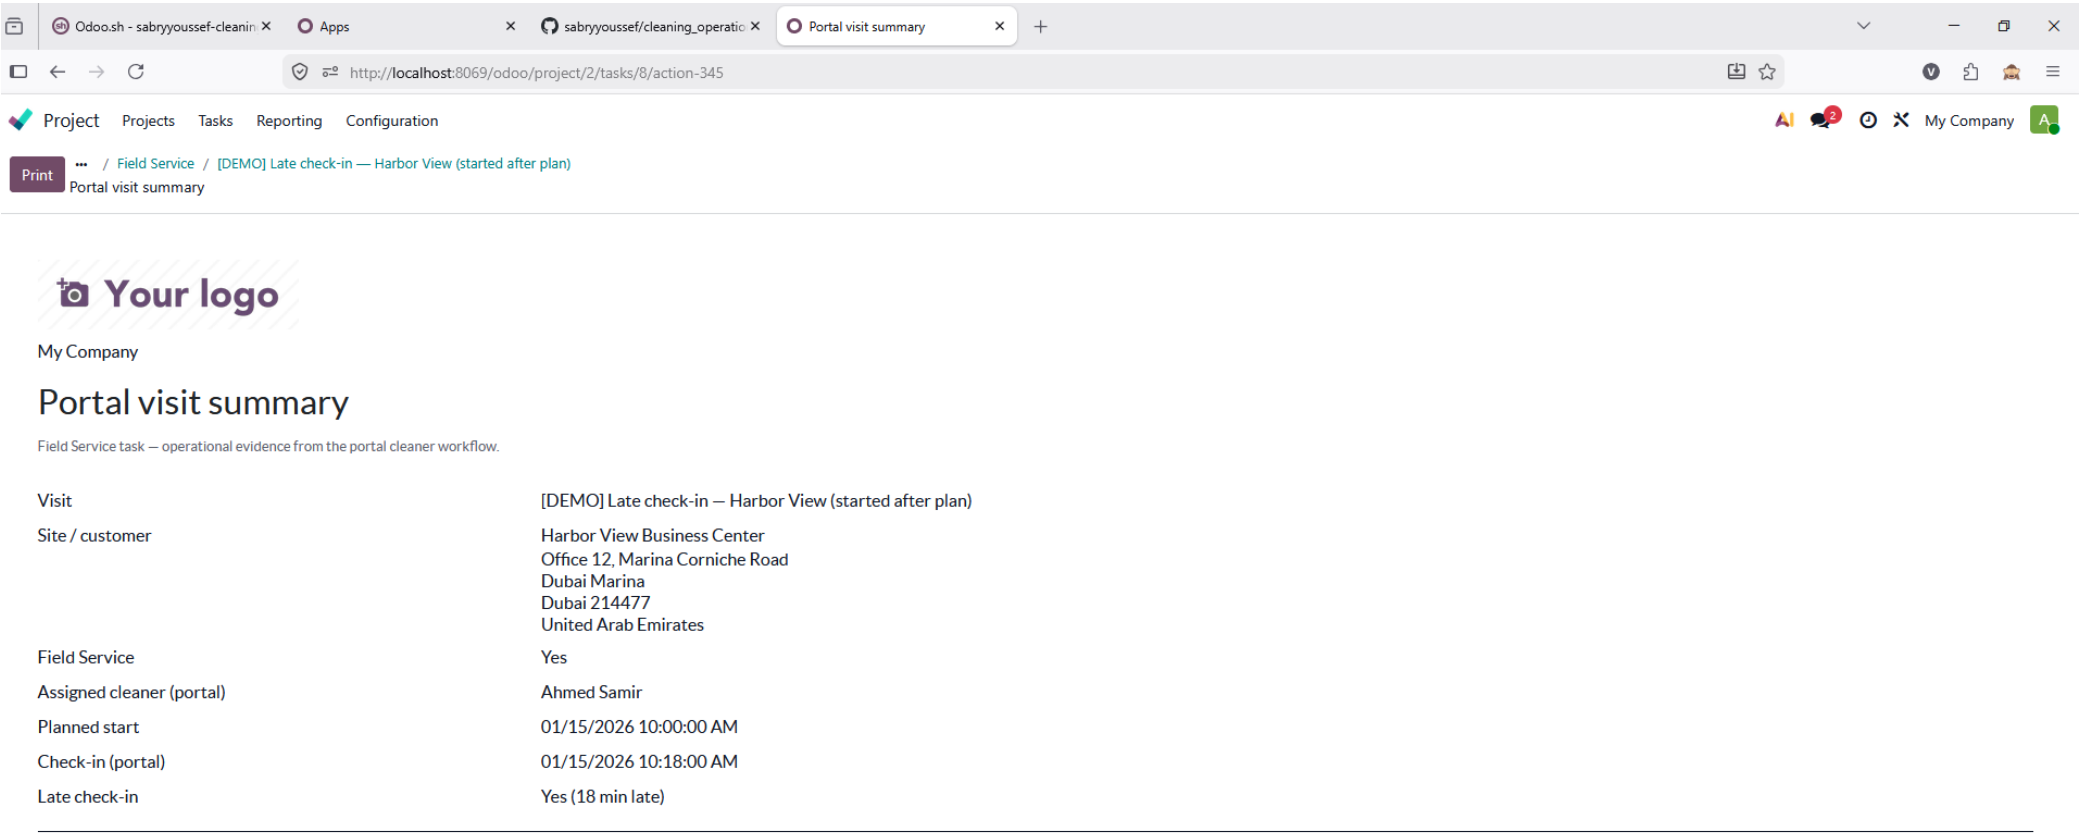
Scene 10 — QR-based entry URL for the visit

Each visit can be opened through a lightweight URL-based QR entry flow.



Scene 11 — Printable portal visit summary report

Manager can export a clean single-visit summary for review and presentation.



Summary

Manager-side visit assignment and oversight

Cleaner portal execution flow

Start and end timestamps

Optional GPS at check-in with graceful fallback

Before and after photo evidence

Late check-in visibility

QR-based visit entry

Printable visit summary report
